Description: This document describes the aspects of the environmental philosophy of BEN Buchele Elektromotorenwerke GmbH and Buchele Elektrotechnik GmbH

Our companies pursue a consistent environmental philosophy, which is based on foresighted action, continuous optimization of processes, use of advanced technologies and the conservation of resources in the use of raw materials and supplies. We want to minimize the impact of our actions on the environment.

We take action to minimize emissions of substances (such as noise, waste, exhaust air, waste water) in general and to prevent harmful malfunctions in particular. To do this, we plan and design our business processes carefully and with a view to possible consequences. Strict compliance with all relevant laws and regulations is a top priority. We also take care of the safe and secure transport of our products, materials and unavoidable waste.

This responsibility for the protection of the environment is not limited to the management but applies to every single employee of our company. We achieve the appropriate awareness among our employees through sensitization by means of targeted information and, if necessary, individual training activities.

In addition, we also want to convince our suppliers of a consistent approach to these topics and our environmental policy.

We take responsibility for our actions in protecting the environment, including the interests of future generations, through all of the actions above.

Nuremberg, 2019/04/15

GF/Schwegler
Executive Director
